

LabelSync™ 450

*High Speed Vision Module for Syncing
Line Codes With Serialized Labels*

Omega's LabelSync™ is designed to capture and sync a bottle's unique serialized label with its unique line code using your preferred serialization software and vision components. LabelSync verifies the readability of the codes, validates that a bottle belongs on the line, establishes the one-to-one relationship between the two codes, and enables high-integrity identification processes downstream. LabelSync can support Omega's DataSync™ as part of a broader Track and Trace solution.

Module Includes:

- Ability to seamlessly integrate:
 - Four cameras for 360 degree label inspection
 - A fifth camera to read the secondary line code
- Connectivity to data management software
- Servo-controlled transfer belts
- Integrated touch screen
- Reject system

Highlights:

- For low to high speed applications
- Handles 30cc-1500cc containers
- Stainless steel construction
- Quick, repeatable height adjustment

Available with integrated line code printing
